

Network Install Instructions without a Server Install V6

These instructions are intended to be used when Exercise Pro will not be run on the server as an application.

Server Install

1. On a PC install the full version of Exercise Pro.
2. Copy the Expro6 folder to the server.
3. Make sure all users have full rights on the Expro6 directory and subdirectories.
4. Uninstall Exercise Pro on the PC.

Client Install

1. Install Exercise Pro. Make sure to check the Network Client option and on the following screen point to the Expro6 directory on the server. (Note you can use either a UNC or a mapped drive).
2. Start Exercise Pro. Register the program when prompted. The registration code will be on the CD case which came with the program.
3. Go to File/Settings. Push the Add button in the Network section and enter the Network code. Verify that the number of Network copies is correct.
4. Repeat step 1 and 2 on each client. Note step 3 only needs to be done once, not on each client.

Note: Unless otherwise noted in your license letter this software is licensed to be used in only one physical location. Any location further than a 15 minute walk is defined as another physical location.
